IRONHACK / PROJECT 3 / 13 NOV 2026

CAREER INTELLIGENCE AGENT

Discover career opportunities. Better understand your potential.

LANGGRAPH | EVIDENCE-LED MATCHING | GROUNDED INSIGHTS

MAXIMILIAN KEMPA · HR TECH / RECRUITMENT & CAREER DEVELOPMENT · **BUILT WITH LANGGRAPH**

Job listings are easy to find.

Good career decisions are harder.

01

Fragmented search

Real vacancies are spread across platforms, with inconsistent metadata.

02

Hidden qualification gaps

A matching title does not prove that a candidate meets the job's requirements.

03

Unverifiable advice

Generic AI answers can sound confident without tracing claims to sources.

- Target user: job seekers navigating career decisions in Germany and relevant European markets.

From a profile to a decision.

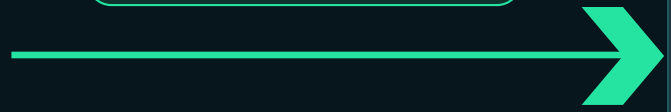

One reviewed candidate profile in. A transparent career report out.

INPUT / USER-REVIEWED

Candidate context

- Skills and experience
- Target roles and preferences
- Location and work model
- Human review + opt-ins

AUTONOMOUS AGENT

OUTPUT / SOURCE-LINKED

Career intelligence

- Matched roles
- Requirements to verify
- Market & career insights
- Structured report

Review once. Then the agent runs.

After the trigger, LangGraph orchestrates the remaining steps without user intervention.

- Conditional execution: if no jobs qualify, recommendation-specific enrichment is skipped — but market intelligence and the report still run.

Deploy

Run settings

Choose a mode

- Demo mode
- Live mode

Live mode contacts external services. Provider limits apply; ESCO, Tavily, OpenAI and Pinecone can incur API charges.

› Optional research and AI features

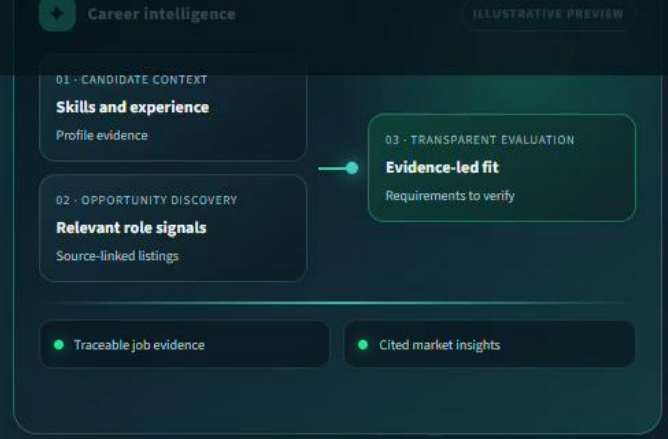

› Bounded search settings

Discover career opportunities.

Understand your potential.

AI-assisted career intelligence connecting your experience to real opportunities, transparent matching evidence, and cited labour-market insights.

✦ Evidence-led matching ✦ Qualifications to verify ✦ Cited market context

01
Build a profile
Add skills and experience.

02
Explore roles
Compare discovered jobs.

03
Review evidence
Check fit and requirements.

04
Plan next steps
Use cited market context.

Live Mode searches real job providers when you run. Optional research and AI features stay off until enabled and may incur charges.

Your candidate profile

Start with an example or enter your own information. Review and edit everything before running the analysis.

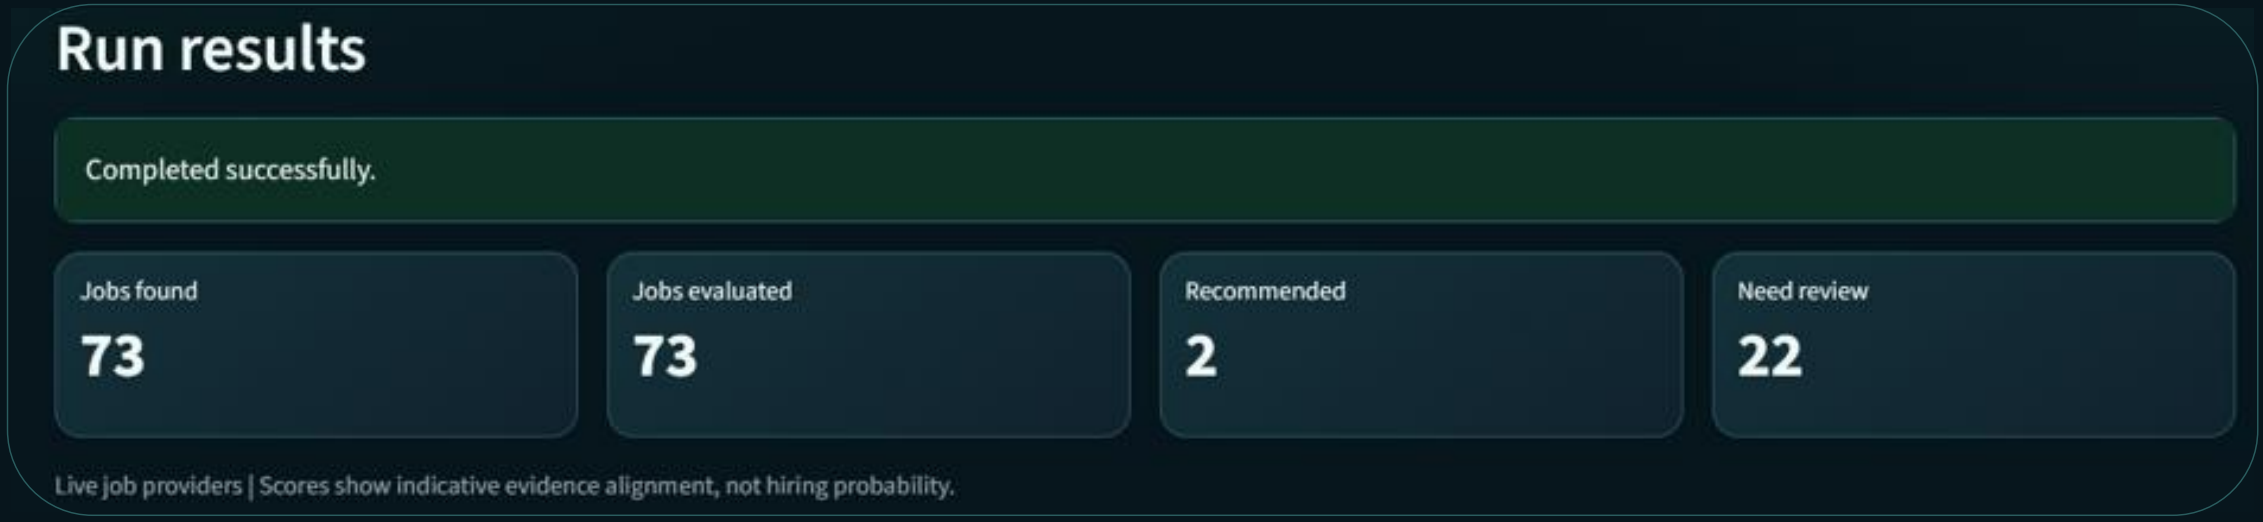

Profile details

Clear All / Start New Profile

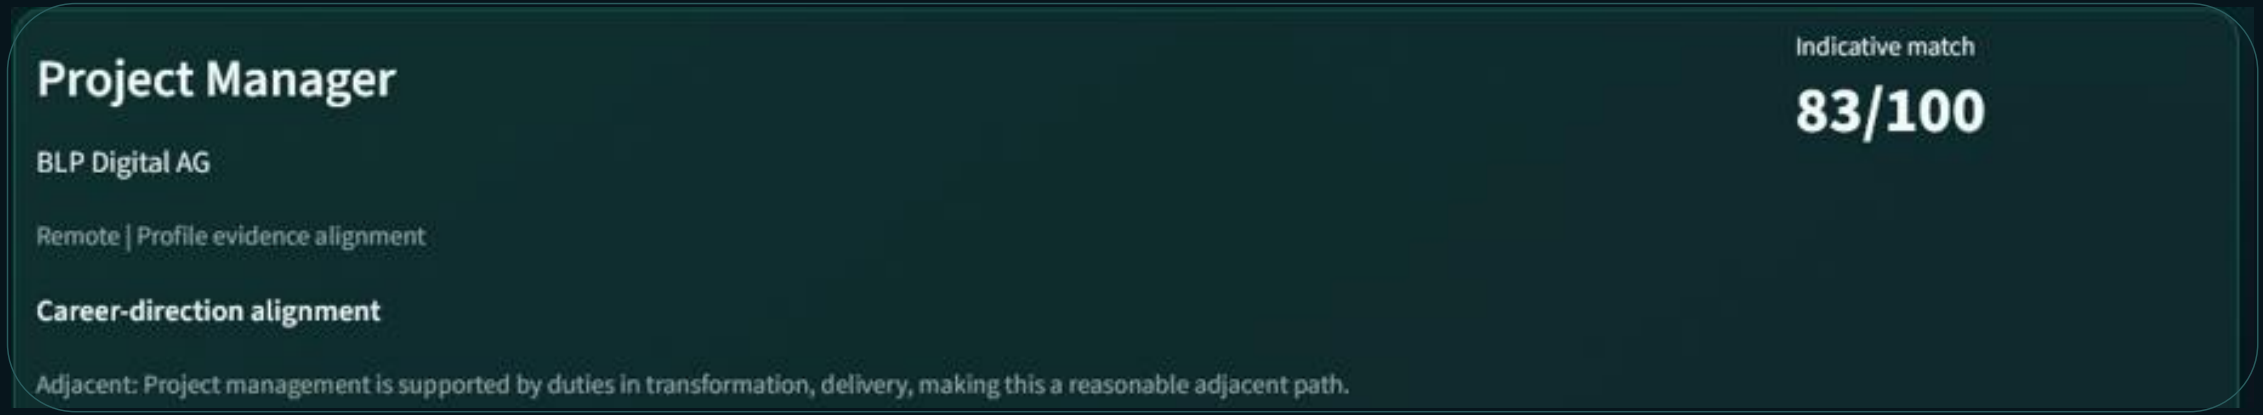

Career direction

73 jobs. Two evidence-backed recommendations.

Actual Streamlit results from the recorded User X demo · indicative matching scores

EVIDENCE-SUPPORTED RECOMMENDATION / PROJECT MANAGER

Why a higher score still needs review.

A target-role match scores 86/100 — but material qualifications still need checking.

PROJECT MANAGER — 83/100

BLP Digital AG

✓ RECOMMENDED

PRINCIPLE AI TRANSFORMATION — 86/100

CONSULTANT · BLP Digital AG

! NEEDS REVIEW

EVIDENCE CHECK / WHY THE HIGHER-SCORING ROLE NEEDS REVIEW

WHY THE 86/100 ROLE NEEDS REVIEW

Strong career alignment — but key job requirements still need evidence.

01 PROGRAM DELIVERY

Experience leading large multi-country / multi-entity programs is not documented.

02 PROCESS EXPERTISE

Order-to-cash is mentioned, but the required depth of P2P / O2C expertise is unverified.

03 SENIOR LEADERSHIP

Senior executive-facing leadership experience is not documented.

High relevance is not enough: undocumented requirements trigger review, not rejection.

Built for evidence. Not guesses.

LangGraph coordinates live tools, deterministic checks and grounded synthesis.

WHY LANGGRAPH?

- Explicit, inspectable agent state
- Conditional routing for missing evidence
- Python validation + 289 passing tests

n8n is strong for visual integrations; LangGraph better fits this Python-heavy matching MVP.

API COST / REPORT **Dynamic · $0.01- $0.05**

All enabled external APIs · indicative, not a cap

OBSERVED RUN TIME **20–60 sec**

Across recorded live runs; response times vary

Three steps beyond the MVP.

Future features and monetization hypotheses — not shipped today.

CAREER INTELLIGENCE AGENT

Better evidence.

Better career decisions.

github.com/Max-Kem/career-intelligence-agent

IRONHACK · PROJECT 3

The hard part was the evidence.

Four practical lessons from building a live career-intelligence MVP.

01 ACCESS & LICENSING

API terms, access limits and research reuse rights constrain which sources can be used.

02 DYNAMIC MATCHING

CVs and job ads vary widely; seniority, location, language and qualifications interact.

03 DATA FRESHNESS

Vacancies and requirements change — reliable advice needs current, traceable data.

04 UNCERTAINTY BY DESIGN

Missing evidence demands explicit review paths, not fabricated certainty or silent failure.

Better matching requires better evidence — not simply a bigger model.
